

The best programmer
is a teacher

OH RRLY?

It's awesome to help people

teaching will accelerate
your own learning

you can get started
right away

Hi!

Looking back...

1

Start with the basics

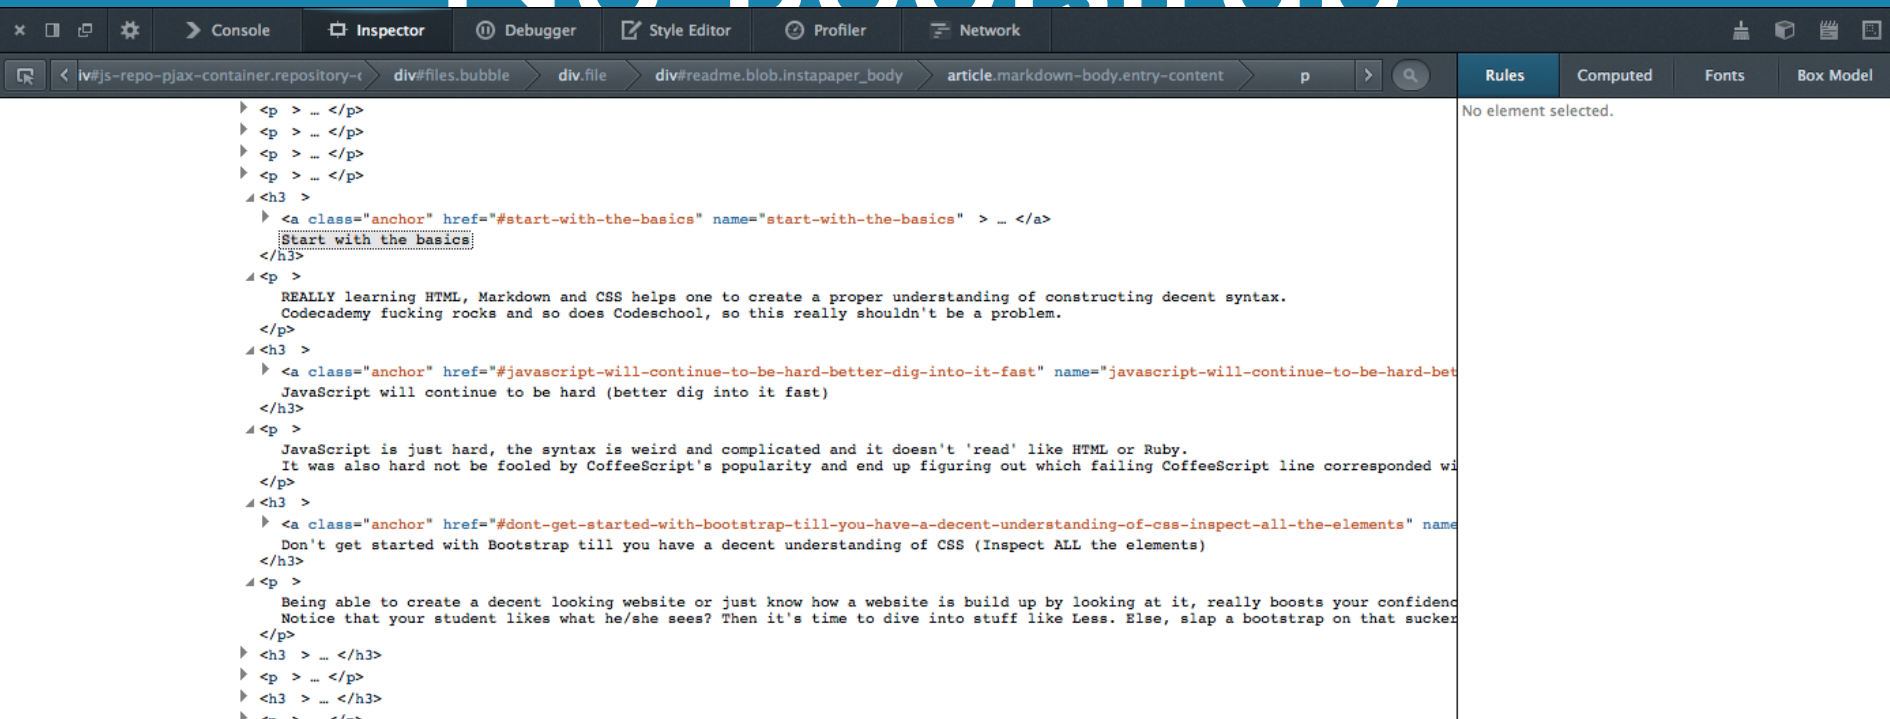

2

JavaScript. Really.

3

No Bootstrap.

No Bootstrap

4

It's a workflow thing.

5

Nobody cares about
your favorite editor.

The tools that you use, are - to a
large extent - incidental.

Josh Susser, panelist at Ruby Rogues

Life is too short to not be happy
with your editor. And it's way the
hell too short to not be happy with
anybody else's choice of editor.

Chalain

6

BDD rocks.

7

Teach them the lingo.

(to a certain extend)

8

Don't let them fake it
till they make it.

and dependency injection in this particular case is great because...

Said no-one ever.

9

Get back to it later.

10

Learn 2 languages.

(just maybe not Java)

11

The matrix.

Did you try turning it off
and on again?

12

Let them teach you.

13

It is not easy.

(stop saying it is)

14

StackOverflow.

The Downs

Help ignore the
people who rain on
their parade

Help overcome the
imposter syndrome

Quit the dev wars.

Open Source is brutal.

Survival of the fittest in the open source world is a pretty brutal mechanism, it works well for producing quality software. But boy is it hard on newcomers...

Google's Chris DiBona

The 1ups

People rock.

Better way of
problem solving.

dorm rooms and
cold pizza

Gamify ALL
the learning

Login
